CUSTOM ELECTRONIC SAFETY DEVICES

Light Curtains

Light curtains are photoelectric presence-sensing devices that create an invisible barrier around a machine or operation zone. When the beams are interrupted the machine shuts down.

Area Scanners

Area scanners monitor an entire user-defined area. This helps shut down a machines operation when someone or something enters into the specified danger zones

Pressure Mats

Pressure sensitive mats can act as an emergency stop when stepped on. They can also be wired in reverse to activate a stop response when pressure is removed from the mat.

Safety Switches

Safety switches come in a variety of styles and options including contact, non-contact, locking, and non-locking. These devices help turn your machine guard into a safeguard.
